

Web Services

At Tekro, we provide a wide array of web services:

Web Design

We work with the best graphic designers around to create a unique professional website. They will mock up the site before development begins. This ensures we get your feedback and make appropriate changes. We can incorporate Flash, AJAX, and make your site the next Web 2.0 site.

Web Development

Our knowledgeable staff of programmers are on hand for web development of any scale, on any platform, using the latest languages and tools available. We customize existing web software, install software, and even write from scratch to meet your application needs. We handle just about any file format (event Excel) and can have your application talking to a database. We've built websites driven by MySQL, PostgreSQL, Microsoft SQL, and Oracle.

Check out our work!

Web Hosting

We offer competitive web hosting accounts. Each account includes an online control panel for managing your web site. You can even check your site's email from a web browser. We offer several hosting packages so one is bound to fit your needs. If one of our packages doesn't meet your needs, we will happily customize a package for you!

Domain Names

As of February 2006, Tekro now offers domain names for sale. We can now be your one-stop-shop for all things web related!
